Usability Metrics Calculation

(for Summative Assessment)

Calculation

$$\text{Task Success Rate} = \frac{\text{No. of participants completed task successfully}}{\text{Total no. of participants}} \times 100\%$$

$$\text{Average Time on Task} = \frac{\text{Total time taken by participants (in sec)}}{\text{Total no. of participants}}$$

$$\text{User Error Rate} = \frac{\text{Total no. of errors made by participants}}{\text{Total number of possible errors}} \times 100\%$$

Example:

<u>Total: 5 participants</u>
Completed Search successfully: 3 participants

$$\text{TSR} = \frac{3}{5} = 60\%$$

$$\text{Avg TOT} = \frac{30 + 60 + 20 + 15 + 15}{5} = 28\text{s}$$

No. of possible errors per user = 5
(forget pw link, type email, reset code, reset pw, confirm pw)

<u>Total: 5 participants</u>
2 users – no errors
1 users – 1 error
2 users – 2, 4 errors respectively

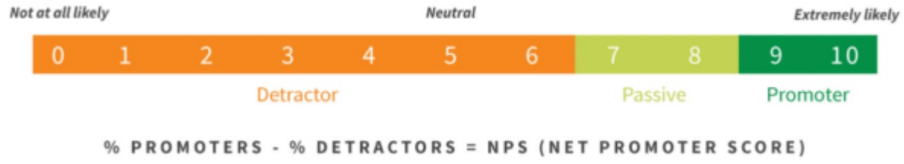
$$\text{UER} = \frac{(2 * 0) + 1 + 2 + 4}{5 * 5} \times 100\%$$

$$= 28\%$$

Calculation

Example:

$$\text{Net Promoter Score} = \frac{\text{No. of promoters} - \text{No. of detractors}}{\text{Total number of participants}} \times 100\%$$



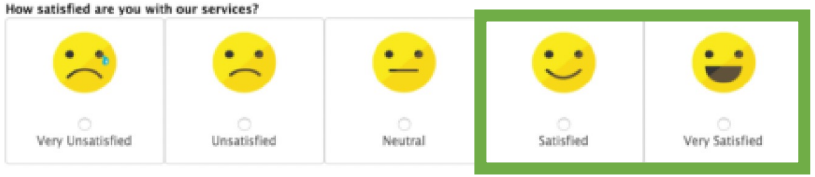
<u>Total: 5 participants</u>

1 – 9 (prom)
2 – 10 (prom)
3 – 7 (passive)
4 – 5 (Detrac)
5 – 8 (passive)

$$\text{NPS} = \frac{2 - 1}{5} \times 100\%$$

$$= 20\%$$

$$\text{Customer Satisfaction} = \frac{\text{No. of 'Satisfied'} + \text{No. of 'Very Satisfied'}}{\text{Total number of participants}} \times 100\%$$



<u>Total: 5 participants</u>

1 – very unsatisfied
2 – unsatisfied
3 – satisfied
4 – satisfied
5 – neutral

$$\text{CSAT} = \frac{2 - 1}{5} \times 100\%$$

$$= 20\%$$
